

Baseline Health Assessment Questionnaire

As a pediatric chiropractor, a major focus in our office is kids and their developing brains and nervous systems. Over the past decade, we've seen a dramatic increase in pediatric issues, such as emotional, personality and behavioural changes, sensory integration problems, developmental delays, weakened or hyperactive immune systems, learning disorders and more.

Many parents are unaware that these issues are indicators of chronic and accumulated nerve distress. Impairment and damage to the nervous system is not always about pain. Especially in children, a healthy nervous system is necessary for growth, development, adaptability, resilience, learning and vitality.

Please fill out this questionnaire to help us identify your child's current state of nervous system functioning and determine how we can help. Once completed, please email this questionnaire to drchensee@gmail.com and we'll help you book your child's FREE Baseline Health Assessment.

Child's Name: _____ Age: _____ Parent's Name(s): _____
